

# How to **print** with SelfPrint

No app needed

9 steps

## START HERE

### Scan the QR code at the counter

Point your phone camera at the QR code posted at the shop. It opens the SelfPrint upload page directly in your browser — no app to install, no account required to get started.

**Use your own mobile data** — not the shop WiFi. Your files upload directly from your phone, so a personal connection is faster and more secure.

## STEP 2

### Upload your file

Tap the upload box on the page and select your file. You can add multiple files to one order.

#### Supported formats

PDF, JPG, PNG, DOC, DOCX

#### DOC / DOCX files

Converted to PDF automatically before printing. This takes about a minute — keep the tab open while it runs.

#### Multiple files

You can upload more than one file in a single order. Each file gets its own print settings.

**STEP 3**

## Choose print settings

Configure how each file should be printed. Your last-used settings are remembered on this device for next time.

**Print type** — B&W or Color

**Copies** — how many you need

**Paper size** — A4, A3, Photo...

**Duplex** — single or double-sided

**Pages per sheet** — fit multiple pages

**Page range** — all pages or select

Add-ons (if offered): spiral binding, cover page, bond paper.

---

**STEP 4**

## Add a note (optional)

Use the note box to leave any special instructions for the shop — for example: *"staple pages", "urgent", or "print only from page 3 onwards"*.

Maximum 250 characters.

---

**STEP 5**

## Choose pickup or home delivery

**Pickup at counter**

Collect your prints at the shop. Pay by cash, UPI, or card when you arrive.

**Home delivery**

Available for PDF and image orders in serviceable pincodes. Online payment required upfront (UPI / Razorpay). Enter your address, pincode, and confirm location.

**DOC / DOCX orders** cannot use home delivery — choose pickup for those. Delivery also requires online payment; cash-at-door is not available.

## STEP 6

### Submit and get your order token

After you submit, you'll receive an order token. This is your reference number for the entire order.

#### YOUR ORDER TOKEN

Write it down or keep the page open. You'll need it to track your order and collect your prints at the counter.

- Paid online? Your order starts processing right away.
- Paying at the counter? Show your token to staff when you arrive.

## STEP 7

### Track your order

Go to [/track](#) and enter your token to see live status:

Uploaded > Approved > Printing > Ready / Delivered

If you registered an account, [/my-jobs](#) shows all your past and current orders — no token needed.

## STEP 8

### Payment

**Pay at counter**

Cash, UPI, or card. Staff mark it paid once received. Works for all pickup orders.

**Pay online**

UPI or Razorpay checkout during submission. Required for all home delivery orders.

**STEP 9****Collect or receive your order****Pickup**

Come to the counter once your order status shows **Ready**. Show your token to staff.

**Home delivery**

Your order is dispatched to the address you entered. Track the status at [/track](#) the same way.

**That's it.** Your prints are ready. No account required, no app to uninstall — just scan again next time.

**GOOD TO KNOW****Tips before you submit**

→ Keep the browser tab open until you see your token — closing early may lose your order.

→ Large files take longer to upload. A stable mobile data connection helps.

- Check the page range and orientation in the preview before submitting — once staff approve the job, printing starts immediately.
